### Air Quality Conformity Determination

## Appendix F

### AIR QUALITY CONFORMITY DETERMINATION

#### Transportation Conformity with Air Quality Plans

Air quality is an important transportation-related issue, especially for health and economic development purposes. The Federal Clean Air Act Amendments (CAAA) of 1990 require that Federally funded transportation plans, programs and projects in non-attainment or maintenance areas conform to the State Implementation Plans (SIP) for air quality. Bernalillo County ~~was~~ is designated as a limited maintenance area for carbon monoxide (CO) ~~until June 2016~~. As part of the development of the MTP, the MPO coordinated transportation planning with the SIP for air quality with the City of Albuquerque Environmental Health Department and other federal, state and local agencies.

#### The Bernalillo County Maintenance Area

Bernalillo County was redesignated to attainment status for carbon monoxide in 1996. After attaining air quality standards, an area is required to commit to and implement a twenty-year maintenance plan in two ten-year parts. Bernalillo County began its second ten-year maintenance period on August 22, 2005, and ~~had fully~~ ~~is now implemented~~ ~~ing~~ what is referred to as a “Limited Maintenance Plan” (LMP). To qualify for limited maintenance plan status, an area must show that the air quality be at levels less than 85% of the relevant National Ambient Air Quality Standards (NAAQS). Bernalillo County ~~qualified~~ ~~s~~ for this standard and ~~has therefore~~ received local, state and federal approvals of its Limited Maintenance Plan.

Transportation plans, programs, and projects ~~were required to~~ ~~must still~~ demonstrate conformity with Limited Maintenance Plans. Under the ~~initial 10 year part of~~ the maintenance plan, the MPO was required to demonstrate that mobile source emissions would not violate the carbon monoxide budgets established in the SIP. This required rigorous analysis of transportation networks and resulting travel to model anticipated vehicle emissions on a regional basis. The total emissions were then compared to the budgets, and if less than the budget, part of transportation conformity was achieved. Other conformity requirements included appropriate consultation, planning and public involvement activities necessary under federal planning rules, and decisions by the air quality technical committee on which “regionally significant” projects to include in air quality analysis.

An important change occurred as of August 22, 2005 in transportation conformity. Since the Limited Maintenance Plan ~~did~~ ~~does~~ not contain emissions budgets, it ~~was~~ is not possible to compare emissions from specific federal plans or projects to an upper emissions limit. For the second ten-year part of the maintenance period of a LMP, in this case 2005-2016, emissions ~~were~~ are not capped. The U. S. Environmental Protection Agency (EPA) believes that it ~~was~~ is unreasonable to expect that so much growth will occur in an area during a maintenance period as to cause a violation of the air quality standards. Recall that to qualify to undertake a LMP, an area must start with a demonstration that the air quality levels are less than 85% of the standard.

The fact that regional emissions analysis ~~was~~ is no longer required brought ~~brings~~ about two significant changes with respect to the interagency consultation process. The MPO ~~did~~ will not have to perform an air quality emissions analysis to demonstrate that emissions produced by projects in the MTP ~~were~~ are less than the air quality budgets for CO. An LMP is based on monitored emission levels rather than modeling.

In lieu of the prior regional emissions modeling to determine conformity, the MPO received ~~a letter~~s from the Federal Highway Administration (FHWA) verifying that the most recent CO levels at air quality monitors remained ~~ed~~ below 85% of the standard. The FHWA received this information from the Environmental Health Department. An example of the letter can be found in the 2040 ~~The letter is included in the~~ MTP. Provided that CO levels remained ~~ed~~ at or below 85% of the standard, regional emissions analyses ~~would~~ will not be required for ~~future~~ transportation conformity determinations. If CO levels exceed 85% of the standard at monitors, the Limited Maintenance Plan ~~would~~ will become invalid and the requirements of the full maintenance plan ~~would~~ will apply once again, including regional emissions analyses.

Under the ~~recently expired~~ LMP (June 2016), the MTP had ~~must still~~ conformed ~~ed~~ to other requirements, including interagency consultation, financial constraint, a minimum 30-day public comment period for the plan, and other federal planning requirements. The FHWA, in consultation with the EPA, had determined that the current 2040~~35~~ MTP for the Albuquerque Metropolitan Area ~~has~~ met those requirements and therefore is in conformance with the ~~former~~ Limited Maintenance Plan. ~~The same process will be utilized for the 2040 MTP.~~ **Should the region fall into non-attainment for other regulated air pollutants in the future, MRMPO will work closely with all stakeholders and outline all necessary steps and requirements it must perform to obtain conformity within this document and subsequent MTPs.**

~~All proposed modifications to the MTP and TIPs will be reviewed by MPO staff and, as appropriate, coordinated with the TCTC to determine whether a change is regionally significant or requires a determination of transportation conformity with air quality plans.~~
